

EnStructural[®]
Civil Engineering Consultants L.L.C.

www.enstructural.com

Civil Engineering | Structural Engineering | Project Management | Energy Consultancy

A dynamic consulting civil and structural engineering company based in Limassol, Cyprus.

We provide innovative solutions to challenging situations.

Our Philosophy

Static design of buildings is an important part of the design of buildings and outdoor areas, thus recognizing the importance of the harmonious coexistence of both sectors, we make sure that the final structural model of the structure is perfectly in line with the architecture of the building, so in essence be a part of it.

Our Goal:

Consult our clients for their best advantage.

Provide on-going support to customers and partners.

Creating long-term relationships.

Construction Safety First.

A successful project is considered the one delivered on time,
in the expected quality and within the specified budget.

About Us

EnStructural in Brief

EnStructural Civil Engineering Consultants L.L.C. is a state of the art consultancy firm comprising some of the prominent Structural Engineers in the industry. EnStructural strives to maintain a high level of quality in its services and aims to be the trend setter in the industry through innovation, state of the art technologies and excellence in engineering. Being able to undertake well over 100 projects within a short span since its establishment reflects the unmatched potential of the dynamic team.

EnStructural is now engaged in some of the landmark projects in Cyprus and overseas. EnStructural strongly intends to expand its services in the Civil and Structural Engineering and intends to be one of the best engineering consortiums in Cyprus and contribute to the development of the country and world at large.

Our Vision

To be the resource and knowledge base in the field of Civil and Structural Engineering.

Mission

Maintaining professional standards for structural engineering, ensuring continued technical excellence, advancing safety, creativity and innovation across the built environment and promoting sustainable approaches in engineering solutions, supporting engineers as they protect, influence and take forward our environment's conservation responsibility.

Consultancy**

Civil Engineering

Our civil design and development expertise encompasses practically every facet of planning, assessment, design and project management, including:

Early budget planning.

Land management, reclamation and conservation studies.

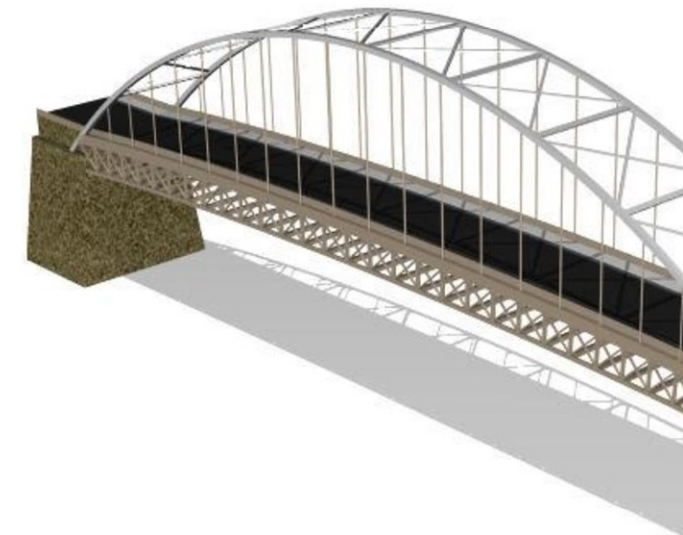

Feasibility assessments and studies.

Environmental impact assessment and studies.

Waste water management.

Water resources and management.

Marine infrastructure and planning.

Structural Engineering & BIM

Our Structural Engineering and Rehabilitation services include:

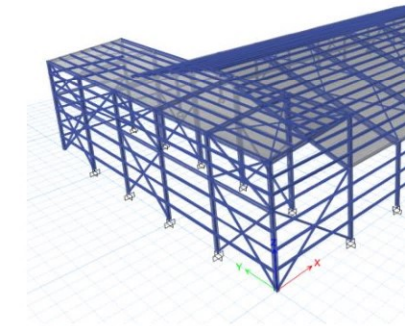

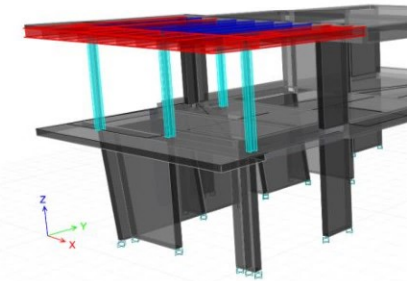

- Structural Engineering Services.
- Structural analysis and design.
- Structural design review.
- Cost effective and Value Engineering.
- Temporary works design for contractors including formworks.

Strengthening & Rehabilitation Services

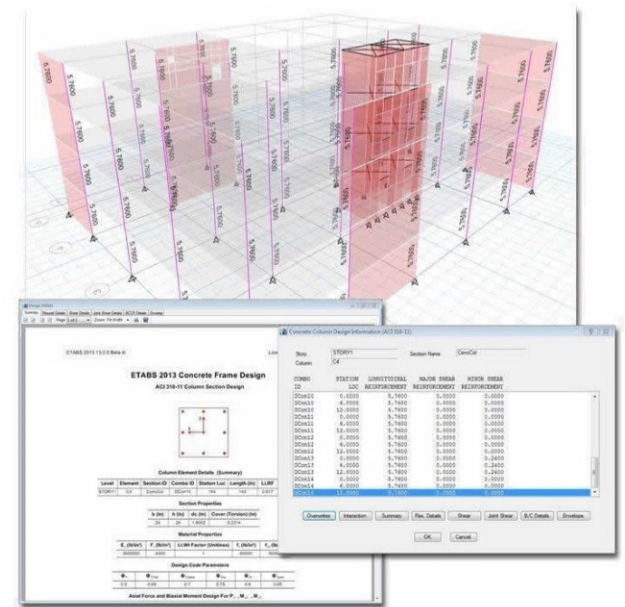

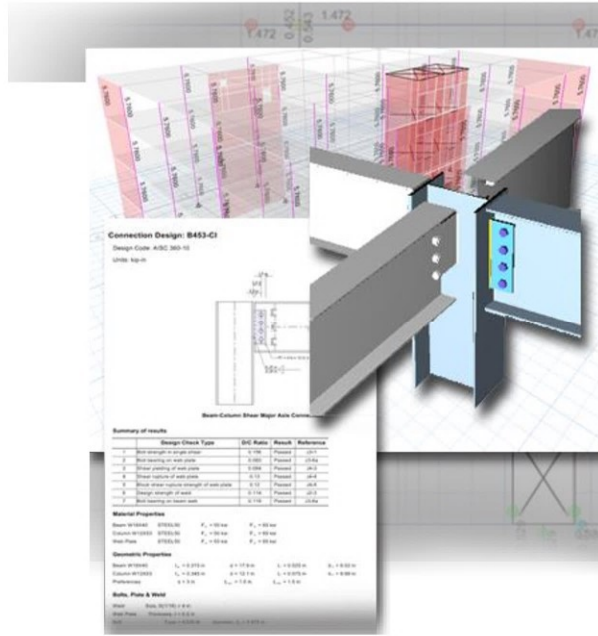

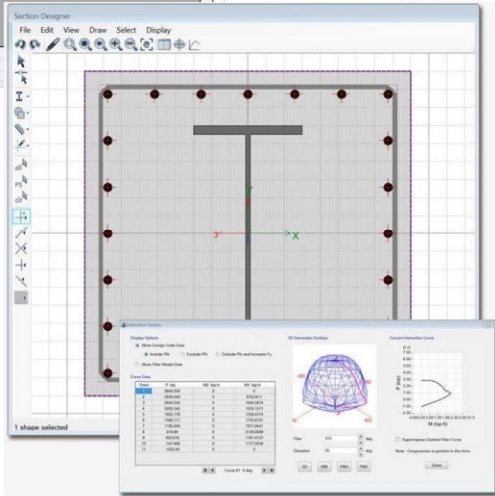

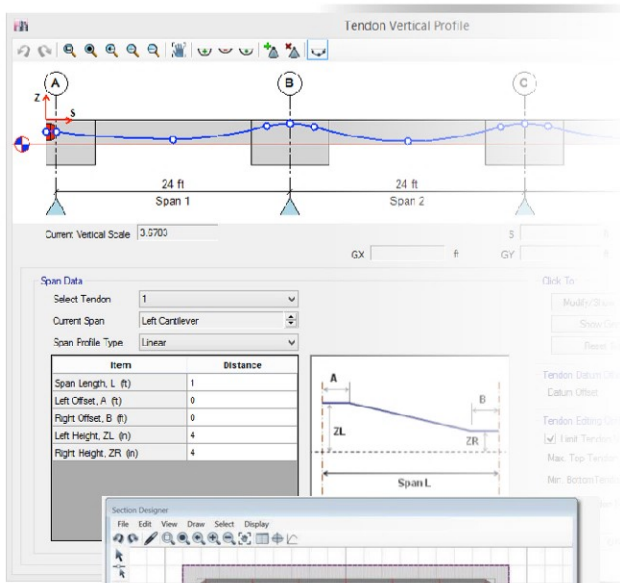

- Repair and strengthening design of structures.
- Strengthening design due to new openings in the slabs or beams.
- Strengthening design due to change in function or addition of loads.
- Strengthening design to add new floors on existing buildings.
- Strengthening design of existing buildings due to structural modifications.
- Supervision of repair and strengthening work.
- Strengthening due to loss in concrete strength or due to lower concrete strength than required.

Assessment & Evaluation Services

- Structural surveys, inspection and investigation.
- Condition Assessment of existing buildings and structures.
- Evaluation of the concrete elements due to leakage in basements, tunnels and underpasses.
- Assessment of buildings after fire and design the required remedial work.
- Service life prediction of existing structures.
- Design the remedial work required to extend the structure service life.
- Provide expert, independent and impartial third party services concerning problems with existing buildings and structures.

BIM Solutions

Project Management

Whether your project is large or small, EnStructural Consultants seasoned professionals provide solutions to your tough challenges. We generate lasting value for our clients, creating unequaled confidence and certainty. At EnStructural Consultants we customize each project approach using our depth of expertise across a wide spectrum of knowledge.

Program & Project Management

We manage the entire program and construction process from pre-design through project delivery and closeout.

Construction Consulting

EnStructural provides comprehensive construction management consulting services that provide the best results for your project.

Project Controls

Successful projects begin when proper planning and procedures are implemented systematically with an ultimate goal of achieving predetermined objectives. A project management plan should be supported by project control processes that monitor work and identify whether the work is proceeding according to plan.

A successful project is considered the one delivered on time, in the expected quality and within the specified budget.

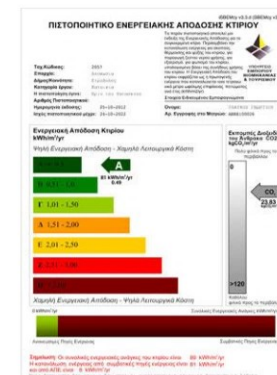

Energy Consultancy

Building green cost effectively requires solutions that address relationships between the whole building and its surroundings. This approach requires extensive pre-planning, a thorough understanding of the relationships between building systems, and significant collaboration among design and construction specialists. Our long history of managing complex, multidisciplinary projects provides us with the expertise to precisely develop and execute integrated project management solutions. We implement a customized approach on green building projects to deeply integrate environmental performance objectives into a program as early as possible. This process clearly defines the overall project goals and value statement and links them inextricably to environmental performance, establishing a foundation for delivering green building projects within conventional budgets.

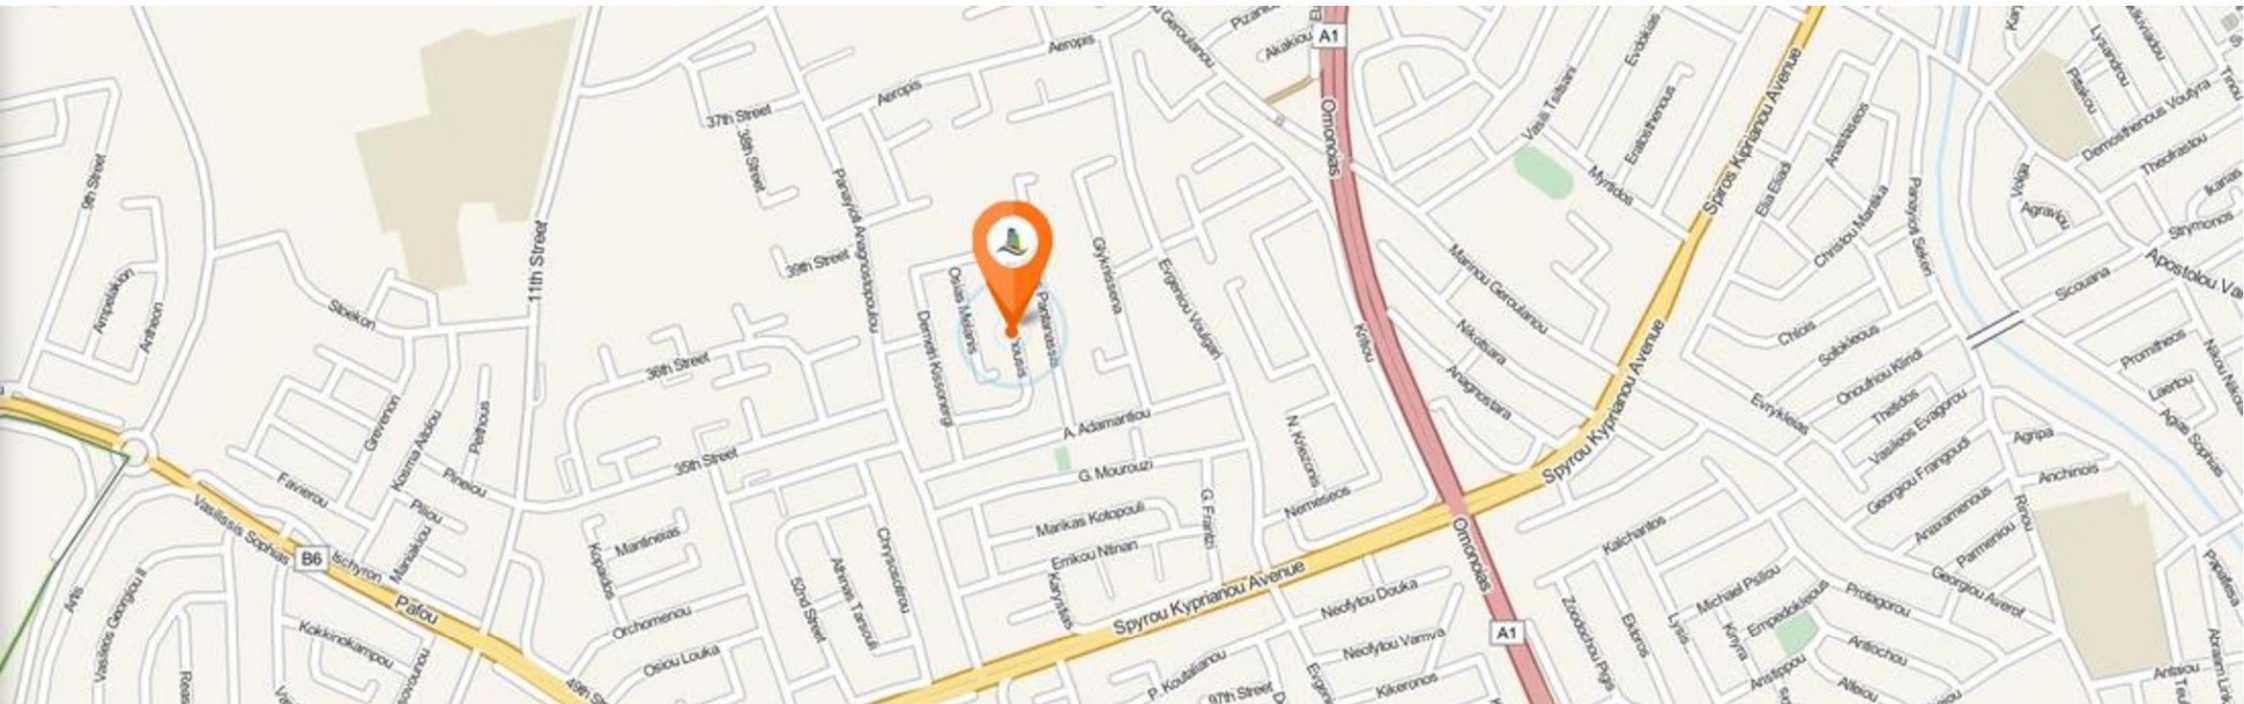

To the extent possible, our green building approach is front-end loaded to facilitate the following pre-design services:

- Energy Efficiency Certificates.**
- Building Energy Efficiency Upgrade Consultancy.**
- Pre-design energy planning.**
- Feasibility studies.**
- Conceptual programming and cost estimating.**
- Project team structure prototyping.**
- Investment/payback analyses consistent with the owner's own criteria.**
- Environmental performance definition and program integration.**
